National Threat Classification deLange et al 2009

- | | | | |
|----|-----------------|---|-----------------------|
| Fr | Fruit | 1 | Nationally critical |
| Fl | Flowers | 2 | Nationally endangered |
| H | Honeydew | 3 | Nationally vulnerable |
| N | Nectar | 4 | Declining |
| Lv | Leaves & shoots | 5 | Recovering |
| | | 6 | Relict |
| | | 7 | Naturally Uncommon |
| | | 8 | Data deficient |

*Italics = Not recorded but likely to have been present***Bold = Present**

Plants people are most likely to recognise and obtain for revegetation
(which are most likely to succeed in a drought prone sector)
