

1 Submitted on Thu 30 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 Bob Gilkison

15 s9(2)(a)

2 To the Department of Conservation & Fisheries New Zealand:

3 Limit the amount of commercial fishing, despite the setbacks to the fishing industry and pescetarians. But
the ocean needs to heal and let the fish populations go up. Encourage more local kaimoana and less of
shipping from far (I guess no bluff oysters then 😊).

2 To the Department of Conservation & Fisheries New Zealand:

3 Marine Reserves benefit all levels of marine creatures. By having NO TAKE zones we enable wildlife to flourish which in turn leads to safe breeding and sustainability for the entire ecosystem. Fish stocks get a chance to replenish and spread out from the controlled area. That is a win , win situation in my book!

4 This is an individual submission in support of greater marine protection in Aotearoa.

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 Mike Penfold

1 Submitted on Thu 30 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 Dianne Fowler

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Felicity Neate

16 s9(2)(a)

17 We must act now to protect the oceans and the species in it and not further treat the ocean like a rubbish
tip.

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 I think that we should help and save our sea life as much as possible so they can be seen by future generations. I think in nz it is important to put these laws in place.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Kaitlyn Stenfert

16 s9(2)(a)

2 To the Department of Conservation & Fisheries New Zealand:

3 I have been a diver for 60 years and have witnessed the depletion of the biodiversity of our coastal waters, In CRA 2 crayfish are now categorised as functionally extinct. I have seen the benefits of marine reserves such as goat island and rue the day the proposed reserve at Great barrier was "canned". The 2000 mission of a 10% NZ coastal marine reserve by way of Biodiversity strategy by 2010 well and truly missed the boat. We are coming from so far behind we must take every opportunity to return to this path before other species become functionally or completely extinct. Large sections of our coastal habitat need to be protected. Lets make This network a move in the right direction.

4 This is an individual submission in support of greater marine protection in Aotearoa.

16 s9(2)(a)

17 Banning all fishing in protected areas would be better still, use marine protected areas to seed surrounding areas with fish stocks.

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 Every marine protected area that I have snorkelled shows the absolute power and benefit of protecting areas, this is the way of the future and every different region in Aotearoa needs a Reserve to see the benefits for that area. Otago is lacking.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Sarah Fort

16 s9(2)(a)

17 Every marine protected area that I have snorkelled shows the absolute power and benefit of protecting areas, this is the way of the future and every different region in Aotearoa needs a Reserve to see the benefits for that area. Otago is lacking.

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 While the fishing industry might bring in dollars for NZ, any disruption to marine species inter-dependency, or damage to their ecosystems can, over a period of time, affect marine resources. It' is a bit like killing the goose that lays the golden egg. We need to make sure marine species are protected, as well as the ecosystems they live in, so that marine resources are reliable and sustainable.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Rose Batchelor

16 s9(2)(a)

17 Marine reserves are so necessary

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 I support establishing the proposed South East Marine Protected Areas network in full, as well as
4 additional protection for marine life in Otago.

4 It is particularly important that the proposed network:

5 Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston.

6 Bans set netting in all marine protected areas, to restore the natural marine communities including top
7 predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.
8 The proposed network needs to be improved by:

8 Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki
9 B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

9 Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the
10 Ōrau Marine Reserve.

10 Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

11 New Zealand has a poor record of marine protection and this proposed network already includes
12 significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
13 meet our international obligations, and protect marine species from climate change impacts.

12 Conservation area: Oceans

13 This is an individual submission in support of greater marine protection in Aotearoa.

14 I support establishing the proposed South East Marine Protected Areas network in full, as well as
15 additional protection for marine life in Otago.

15 It is particularly important that the proposed network:

16 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston

17 * Bans set netting in all marine protected areas, to restore the natural marine communities including
18 top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's
19 dolphins.

18 The proposed network needs to be improved by:

19 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending
20 Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

20 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in
21 the Ōrau Marine Reserve

21 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

22 New Zealand has a poor record of marine protection and this proposed network already includes
23 significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
24 meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 To whom it may concern,

4 My husband, stepson, and I live in Dunedin. My husband works as a University of Otago staff member, my stepson as a handyman, and myself as a writer. We all believe protecting New Zealand's marine life is important and that we can do this by extending and establishing marine protected areas.

5 Our marine life is some of the most unique in the world and, due to climate change and fishing, is struggling to survive. The other week, my flatmate and I went on a tour to see our yellow-eyed penguins on the Otago peninsula. It was a magical experience, seeing them come out of the waves and up the green seaside hills, chasing each other while they made their Hoihu cries. This experience made me proud to live in New Zealand and is what brings many tourists to our shores. But we need to do more to protect these natural and native treasures. These penguins are the rarest in the world and are struggling to survive, mainly from lack of food due to fishing. They and other marine life need a chance to survive before they are lost forever. Losing these environments and the beautiful, unique life that lives in them would be a loss to our identity and who we are as New Zealanders. Protecting them should be a part of our identity too.

6 King regards,

7 Elizabeth Montague

18 good decisions and actions

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 Sandra Pegg

15 Connor Snedecor

16 s9(2)(a)

17 Otago's unique marine environments and species are one of it's biggest tourism draws. When fishery is no longer profitable, tourism will have to sustain this area - if there's anything left of these draws.

1 Submitted on Fri 31 Jul 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 We need to take care of our marine life and coastal areas.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Julie Perelini

2 To the Department of Conservation & Fisheries New Zealand:

3 As a marine biologist I know and have seen the benefits of MPA's. I used to live and work on the island of
Guam and MPA's there were extremely beneficial for marine life. Although many of the fishermen there
did not particularly enjoy the restrictive nature of the MPA's, they did not doubt their usefulness and their
ability to preserve marine diversity. I know that if they were successful in Guam that the MPA's will be
extremely successful here in New Zealand. The South East area is an amazing place and the flora/fauna it
holds are truly special. I hope that the right choices are made to protect and treasure them.

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Marloes Leunissen

2 To the Department of Conservation & Fisheries New Zealand:

3 We need to stop over fishing particularly in these areas of coastline-no wonder sea life is dying when we take so much from them-fish are there to feed wildlife and the more areas we can protect the better. The birds and penguins are having to travel further and further to feed themselves and their young and in doing so put themselves at greater treat of death of themselves, their young and indeed their entire species (yellow eye penguins and royal albatross for example). Please protect their future and our future by providing this critical marine protection. Thank you

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 Marine protection is vital to allow areas to recover from damage caused by over-fishing, set nets and land
run-off. Please open a Marine Reserve in the Otago area to bring it up to scratch with the rest of NZ. Thank
you.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as
additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including
top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's
dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending
Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in
the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes
significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
meet our international obligations, and protect marine species from climate change impacts.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 We really need to do this now.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 I support the detailed comments put forward by Forest & Bird, particularly in relation to the Otago Region where at present there are no Marine Reserves. The current bad news about the state of the hoiho endangered population means urgent action is needed; the same for Hector's dolphins. Biodiversity preservation is more important than commercial considerations.

1 Submitted on Sun 2 Aug 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 With a policy of harvesting marine species up to 80% of natural abundance, and then adding in accidental by-catches and by-kill, never mind illegal harvesting of various kinds, our marine taonga is at risk of plunging into extinction! The kina barrens are evidence of how this can occur in waters that were thought to be abundant.

4 There is so much talk from the industry and recreational fishers about "protecting the fishery" -- and no doubt the good people of Newfoundland thought they were doing that when they continued to extract North Atlantic cod! Now, as a result, the Grand Banks are a scene of emptiness. Do we want to repeat that mistake when we're in a position to learn from history and science and do things better?

5 This is an individual submission in support of greater marine protection in Aotearoa.

6 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

7 It is particularly important that the proposed network:

- 8 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 9 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

10 The proposed network needs to be improved by:

- 11 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 12 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 13 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

14 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

15 Ngā mihi,

16 Russell Poole

17 s9(2)(a)

18 With a policy of harvesting marine species up to 80% of natural abundance, and then adding in accidental by-catches and by-kill, never mind illegal harvesting of various kinds, our marine taonga is at risk of plunging into extinction! The kina barrens are evidence of how this can occur in waters that were thought to be abundant.

2 To the Department of Conservation & Fisheries New Zealand:

3 During the COVID-19 lockdown, when human activity was reduced, it was heartening to see nature bounce back. Dolphins, penguins and numerous birds were suddenly far more noticeable in our bay. Wouldn't it be great if we could reduce human impact more often. A regular lock down for nature Recovery sounds wacky - but Could it help the greater ecosystem survive?

4 This is an individual submission in support of greater marine protection in Aotearoa.

2 To the Department of Conservation & Fisheries New Zealand:

3 I used to work protecting Hoiho on the Otago coast 3 years ago and it was so sad to see the multiple issues that were contributing to the decline in their population across the majority of their habitat. A marine reserve would be a massive step towards the recovery of Hoiho. I know personally that starvation is one of the problems that is facing Hoiho and having a marine reserve close to shore will seriously help them feed their chicks and result in tangible population growth. Hoiho are just one species that would benefit from this marine reserve but are an umbrella species that would protect many more iconic species if they were protected, species like the royal albatross and the NZ Sea lions. The Otago coast is a hot spot for marine diversity because of its unique geology and sea currents combining to create an abundant food source and this is why it has been over fished by humans for so long. Bottom dredging in particular seems to be extremely damaging for Hoiho feeding grounds creating underwater deserts. What you the people making this decision about this marine reserve have to decide is to make a choice between peoples wants and natures needs. Usually people put their needs before nature and the disastrous result is evident around the world. I urge you not to give into the powerful and vocal fishing lobby and put NATURE FIRST!!!

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 Our marine life is facing so many threats, our oceans are already suffering from so many forms of pollution, we cant afford to keep adding to it for any reason whatsoever.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

2 To the Department of Conservation & Fisheries New Zealand:

3 Continuously we are modifying our environment. We can't stop this but there are times we need to say 'stop'. We know our marine environment is in need of protection. Look at the fishing industry telling us how concerned it is for our oceans. has anyone thought how our oceans might be in 50 years' time? As i kid I would gather toheroa on Muriwai Beach. Now there are none. Is this trend going to continue until there are no fish - or shellfish - for any of us?

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

5 Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston.

6 Bans set netting in all marine protected areas, to restore the natural marine communities including top
7 predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

7 The proposed network needs to be improved by:

8 Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki
9 B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

9 Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the
10 Ōrau Marine Reserve.

10 Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

11 New Zealand has a poor record of marine protection and this proposed network already includes
significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
meet our international obligations, and protect marine species from climate change impacts.

12 This is an individual submission in support of greater marine protection in Aotearoa.

13 I support establishing the proposed South East Marine Protected Areas network in full, as well as
14 additional protection for marine life in Otago.

14 It is particularly important that the proposed network:

15 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston

16 * Bans set netting in all marine protected areas, to restore the natural marine communities including
top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's
dolphins.

17 The proposed network needs to be improved by:

18 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending
Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

19 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in
the Ōrau Marine Reserve

20 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

21 New Zealand has a poor record of marine protection and this proposed network already includes
significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover,
meet our international obligations, and protect marine species from climate change impacts.

22 Ngā mihi,

23 Jonny Price

24 s9(2)(a)

25 I support establishing the proposed South East Marine Protected Areas network in full, as well as

additional protection for marine life in Otago.

26 It is particularly important that the proposed network:

27 Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston.

28 Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

29 The proposed network needs to be improved by:

30 Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

31 Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve.

32 Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

33 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 I have been fishing, snorkelling and diving NZ and Pacific waters since the 1970s so have seen the steady
decimation of fish stocks and damage to benthic habitats from bulk fishing methods over the last 50 years.
Existing frameworks and methods of controlling fishing impacts under the Fisheries and Marine Reserves
Acts have been applied inconsistently and to an insufficient extent so far. The proposals for an integrated
approach in the South East SI is therefore supported, with the extensions suggested in this submission.

2 To the Department of Conservation & Fisheries New Zealand:

3 I urge the government to establish the proposed South East Marine Protected Areas, and the additional improvements suggested by Forest and Bird to provide much-needed protection of the marine life in the Otago area. With respect to supposed adverse effects on fisheries, there is well-documented evidence that marine reserves enhance fish stocks in adjacent waters, as opposed to reducing available fish stocks for commercial and recreational fisheries.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 chris Henderson

16 s9(2)(a)

17 I support all the points made in the Forest and Bird submission and would add that more protection needs to be afforded to kelp forests because they provide the nurse for many species of aquatic life, and also sequester huge quantities of carbon dioxide so vital to life on Earth.

1 Submitted on Sun 2 Aug 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 We need to be doing our best to protect our marine flora and fauna, now and future proofing.

4 This is an individual submission in support of greater marine protection in Aotearoa.

5 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Beccy Creswick

16 s9(2)(a)

17 We need to be doing our best to protect our marine flora and fauna, now and future proofing.

17 More marine protection required to allow our environment to thrive!

1 Submitted on Mon 3 Aug 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 Lindsay Michelle

6 It is particularly important that the proposed network:

- 7 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Jonathan Rickard

17 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

18 The proposed network needs to be improved by:

19 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.

20 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve

21 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

22 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

23 Ngā mihi,

24 Samuel Heares-Farry

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

- 8 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

9 The proposed network needs to be improved by:

- 10 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 11 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 12 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

13 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

14 Ngā mihi,

15 Caitlin Doube

17 I support this petition in its entirety

1 Submitted on Mon 3 Aug 2020

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 Our oceans are an important part of our biodiverse planet. The total areas protected are miniscule compared to areas where fishing or other take occurs. The science is very clear that we need to protect more areas, and we need to make those areas we do protect larger in size and ensure that they cover all of the diversity within them. Forest & Bird has been involved with this process for many years, and the science backs these suggestions. Please do not cave to pressure from fishers, or those who are only really interested in themselves, and not the wider wellbeing of our planet, our people and the things we need to protect. Please establish the proposed SEMPA network in full and include additional protection where included in this submission.

4 This is an individual submission in support of greater marine protection in Aotearoa.

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

13 Ngā mihi,

14 stuart hanchet

- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 This is an individual submission in support of greater marine protection in Aotearoa.

4 I support establishing the proposed South East Marine Protected Areas network in full, as well as additional protection for marine life in Otago.

5 It is particularly important that the proposed network:

- 6 * Protects sea caves and the entirety of deepwater reefs at Te Umu Koau near Palmerston
- 7 * Bans set netting in all marine protected areas, to restore the natural marine communities including top predators and seriously threatened species, such as yellow-eyed penguins, sea lions and Hector's dolphins.

8 The proposed network needs to be improved by:

- 9 * Better representing dolphin, little blue penguin, and unrepresented sea tulip habitats by extending Waitaki B1 Marine Reserve and Moko-tere-atorehu C1 southwards and offshore to 12 nautical miles.
- 10 * Gaining some of the richest high current biodiversity in the entire network, by including Tow Rock in the Ōrau Marine Reserve
- 11 * Ensuring representation of the Catlins habitats with protection either at Long Point or the Nuggets.

12 New Zealand has a poor record of marine protection and this proposed network already includes significant concessions to fishing. We need the fullest network possible to help marine ecosystems recover, meet our international obligations, and protect marine species from climate change impacts.

2 To the Department of Conservation & Fisheries New Zealand:

3 It is so important for the continued health and well being of the human population as well as the sea creatures that they (the sea creatures) all have a place to raise their young that we absolutely can't afford not to have a decent amount of Marine Reserves. It becomes even more important given the onset of global warming.

2 To the Department of Conservation & Fisheries New Zealand:

3 NZs current MPAs are simply not good enough and do not cover a wide enough area to truly make a positive impact in protecting our unique marine life. The endangered status of Hoiho and Hector's dolphin are proof of this. NZ must step up and do better or our natural heritage will disappear forever. I am in full support of the proposed network.
