

Figure 4. Above: Colin Meurk resurveying the vegetation monitoring transect on the 1984 fenceline, Campbell Island.

Below: Viv Nicholls and Colin remeasuring a quadrat on Homestead Ridge, Campbell Island.

Figure 5. Above: Looking along the 1970 fenceline, Campbell Island. There is much more snow tussock (*Chionochloa antarctica*) where stock were first removed (to the left).

Below: Looking along the 1984 fenceline, Campbell Island. The difference is less apparent, though there are fewer grasses to the left, where stock were removed last.
